Krishna

SOFTWARE ENGINEER • FULL STACK DEVELOPER

Noida, India / Chandigarh (Ready to relocate) +91 8427579444 mrkrishnawork@gmail.com

github.com/mrkrishna20

PROFILE

- 3+ Years of experience in Full Stack Development (React.js, Node.js, Java & Ruby on Rails).
- Skilled in advanced web development, mobile development, UI design, testing, and debugging applications. Adept at self-management and collaborative work in team settings.
- Possesses working knowledge of Java, Python, React Native, and Angular.

Core Responsibilities & Impact:

- Orchestrated a complete redesign of existing applications to improve performance, scalability, and user experience.
- Mentored junior developers through code reviews and shared expertise in React.js and Ruby on Rails.
- Applied strong expertise in JavaScript (3+ years), Azure (1 year), and SQL (3+ years) to optimize application performance and backend integrations.

TECHNICAL SKILLS

Frontend: React.js, Next.js, React Native, Expo, Redux & Redux Toolkit, JavaScript (ES6+), TypeScript, HTML5 & CSS3, Tailwind CSS, jQuery, Angular

Backend: Node.js, Ruby on Rails, Express.js, ActiveRecord, Sidekiq & Redis, Python, Java, RESTful APIs, RSpec & TDD

Databases: PostgreSQL, MySQL, MongoDB, Database Indexing & Query Tuning, Data Modeling & Schema Migrations

Tools & Cloud: Git & GitHub, Azure, Render, Docker, CORS & Puma Setup, CI/CD Workflows

EDUCATION

Bachelor's of Computer Applications (BCA) Sept 2017 – Jul 2020

Punjab University, Chandigarh

EMPLOYMENT HISTORY

Software Engineer, Stelling Technologies (Railyatri) Noida, India | Aug 2025 – Present

- Developed scalable, high-performance web applications with a focus on maintainability, security, and user experience.
- Improved application performance through efficient API design, database optimization, reusable architecture, and seamless third-party integrations.
- Collaborated with cross-functional teams to design modular backend endpoints and maintainable frontend user flows.

Team Lead & Software Engineer, Expandimo Technologies
Mohali, India | Nov 2023 – Nov 2024

- Led a team of 4 engineers in developing Kinetzine, a secure document management platform that enabled users to upload, organize, and share PDF documents.
- Delivered scalable features, reusable components, secure authentication, REST APIs, database optimizations, and performance improvements to ensure a reliable user experience.
- Conducted thorough code reviews, guided architectural decisions, and established testing best practices for the team.

Software Engineer, Visions Chandigarh, India | Dec 2021 – Aug 2023

- Developed Squadsy, a scalable multi-tenant Employee Management System, implementing dynamic subdomains, role-based access control, and notification services.
- Engineered background job processing pipelines and third-party integrations (Slack, Gmail, etc.) to automate employee workflows.
- Optimized database queries and API response times to deliver a secure, reliable, and high-performance enterprise user experience.

FEATURED PROJECTS

Zuno — Location-Based Social Networking Platform (Link: zuno-frontend-omega.vercel.app)

Developed Zuno, a location-based social networking platform using Next.js, TypeScript, React, React Native, Expo, Ruby on Rails, and PostgreSQL. Built web and mobile experiences for location-based posts, stories, profiles, likes, comments, bookmarks, follows, notifications, conversations, and messaging.

- Implemented geolocation-based content discovery using browser/device location permissions, reverse geocoding, latitude/longitude storage, Haversine distance calculations, and progressive 1–5 km search-radius fallback.
- Implemented JWT authentication with HTTP-only cookie sessions for web and secure token storage with bearer authentication for mobile.
- Designed PostgreSQL-backed ActiveRecord models with relational associations, validations, database migrations, callbacks, and self-referential many-to-many follow relationships.

- Configured CORS, Puma application serving, environment variables, PostgreSQL deployment, and production hosting through Render.

IntrCity (RailYatri) — Hierarchical Analytics & Admin Platform

Full-stack development on the IntrCity project at RailYatri. Developed end-to-end features spanning Ruby on Rails backend APIs, React user interfaces, admin panel functionality, and a multi-tiered hierarchical reporting module.

- Architected a hierarchical analytics and reporting module presenting data across multiple organizational tiers (National, State, City, and nested levels).
- Designed and developed REST APIs in Ruby on Rails, implementing business logic, dynamic aggregations, and data processing for hierarchical reporting.
- Created models, controllers, associations, validations, and optimized database queries using ActiveRecord and SQL.
- Built interactive React user interfaces with dynamic tables (rows and columns based on organizational hierarchy) and seamless level-to-level navigation.
- Developed administrative panel functionality enabling operators to monitor and navigate reporting data across organizational hierarchies.

Kinetzine — Secure Document Management Platform

Led the development of a secure document platform that allows users to upload, organize, and share PDF documents. Designed scalable REST APIs, role-based access controls, and performant UI components ensuring seamless team document handling.

- Delivered reusable React component architecture and optimized backend data pipelines.
- Integrated secure token authentication and granular access controls for document privacy.
- Streamlined PDF processing workflows and storage optimizations.

Squadsy — Multi-Tenant Employee Management System

Built a multi-tenant enterprise employee management system featuring dynamic tenant subdomains, role-based permission tiers, background job queueing, and automated Slack and Gmail notification services.

- Implemented dynamic subdomains for seamless multi-tenant database isolation.
- Engineered background task processing for asynchronous report generation and bulk notifications.
- Integrated Slack and Gmail APIs for real-time employee event webhooks.
